1. INTRODUCTION

1.1 Purpose

The main purpose of this software document design is to help in both design and development of the product. This project design can also be use in future for another related project. This will help the developer to develop step by step and design the interfaces through which user will interact.

1.2 Scope

Web site is to provide a set of parameters that are easy to navigate on the web pages and provide information sufficient depth and college at the same time.

The existence of two possible groups of viewers:

1. Student can get more detailed about intermediate, graduate, post graduate and professional.
2. Students of college looking for some information.

Web site aims to ultimately increase the number of college students, to encourage more students to choose a college.

This product will be launch to maintain the whole work that caught the attention of the audience information and guidance is considered of the highest importance.

Benefits of this product will be:

- Info about intermediate, graduate and postgraduate on a wide spectrum of

personal and professional career.

- Up to date information in a timely and encourages readers to return to the site.
- The new user can get home online.

1.3 Overview

The project is built under the different strategies and on the user requirements criteria. The rest of the project will contain the project designing of the interfaces and overall system working.

1.4 Reference Material

- <http://www.w3schools.com>
- Wikipedia

1.5 Definitions and Acronyms

Bootstrap - This is a tool for designing web sites. In this the use of CSS, JavaScript and PHP and Html also. It has a very effective tool forms.

2. SYSTEM OVERVIEW

This SDD is divided into 6 sections with various subsections, which are described below.

1. Introduction
2. System Overview
3. System Architecture
4. Data Design
5. Component Design
6. Human Interface Design

3. SYSTEM ARCHITECTURE

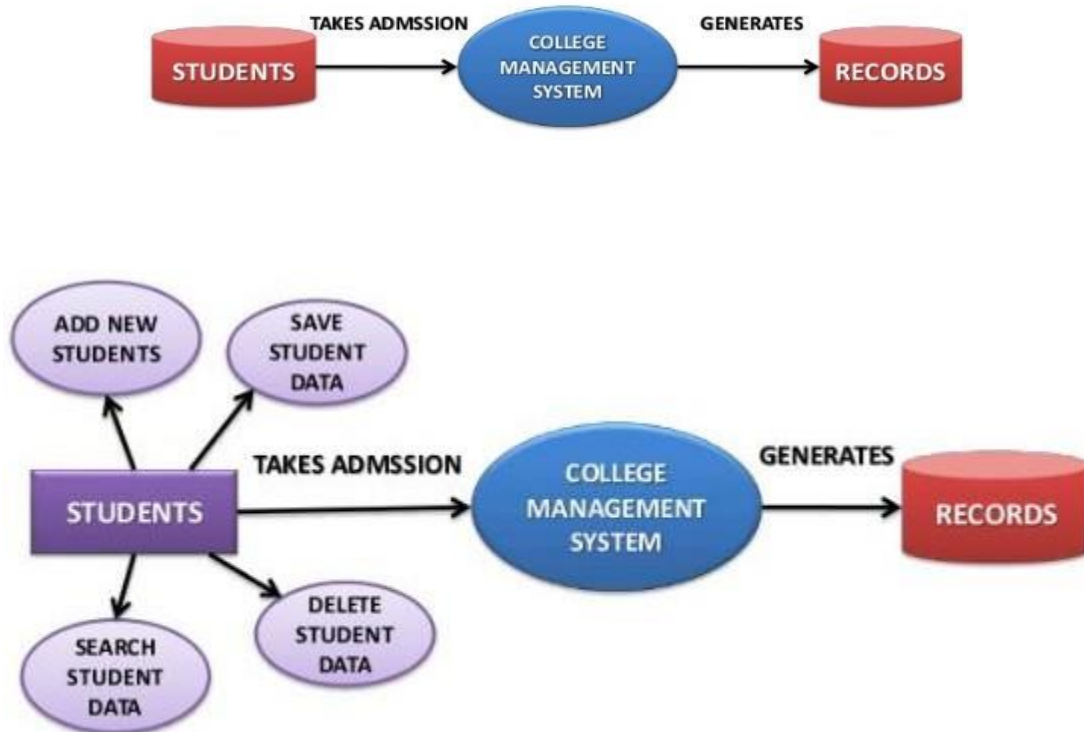

3.1 Architectural Design

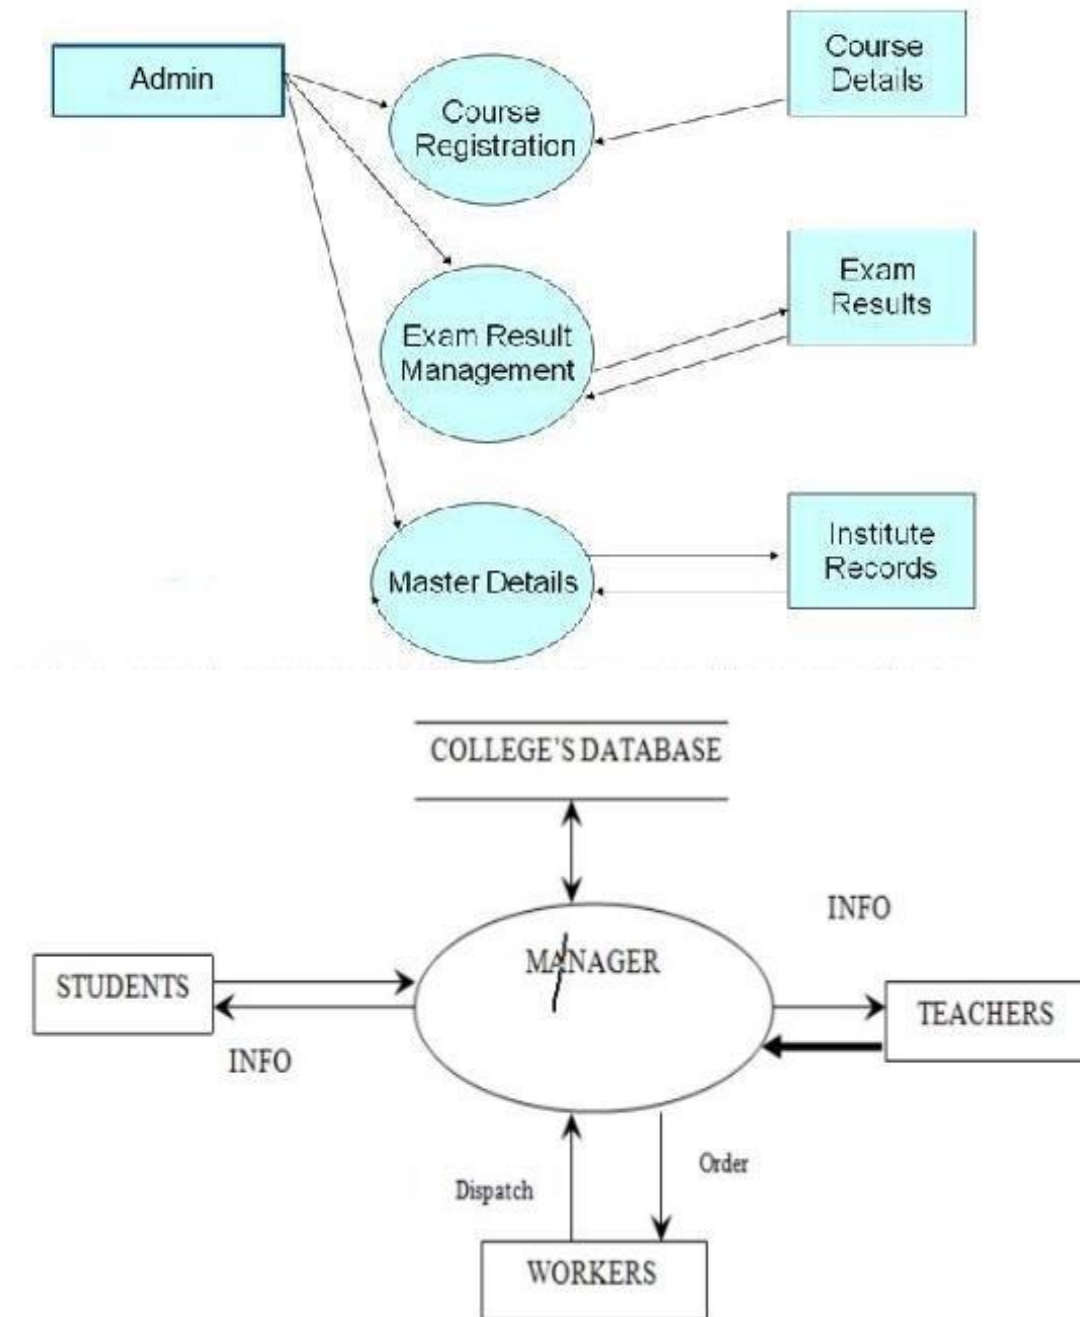

The project, entitled "Online College management system". An application based on the Intranet is defined as that is to provide the information within the college. This system can be used as an information management system for college. For a given student / staff (technical / non-technical) Administrator login ID and password, upload or database can access the system to download information about their student / staff (technical / non-technical) creates using.

3.2 Decomposition Description

Online College management system Application has many interfaces like home (where user can login and then access complete features of software), about us, downloads, programs, news and events etc.

You can see the following DFD which is about user interaction with software.

3.3 Design Rationale

We wanted to build a system that is secure and Un-Authorize persons can't access the record which is stored in the system. That's why we use sql database for storing the records.

We choose PHP language to develop this application.

4. DATA DESIGN

4.1 Data Description

- **Administrator**
 - Name, ID, Password.
- **Student**
 - ID, Name, Class, Address, Batch Year, Phone No.
- **Teacher**
 - ID, Name, Class, Address, Phone No, Qualification

4.2 Data Dictionary

1. Administrator:

Parameter	Parameter Type
ID (primary key)	Integer
Name	String
Password	Varchar

2. Student:

Address	Varchar
Batch Year	integer
Class	string
ID (primary key)	Integer
Name	String
Phone No.	Integer

3. Teacher:

Address	Varchar
Class	string
ID (primary key)	Integer

Name	String
Phone No.	Integer
Qualification	String

5. COMPONENT DESIGN

Component design is the graphical representation of the complete overview of the application which is developed in any language etc. Complete graphical representation for the application is given below in the human interface design.

6. HUMAN INTERFACE DESIGN

6.1 Overview of User Interface

The website should be hosted on a server that can provide adequate response time. High school students tend to have short attentions spans, so a slow server would not be satisfactory for this application. The current college (www.aicbwp.edu.pk) site is a good example of rapid response time.

6.2 Screen Images
